RYANAIR AND THE ENVIRONMENT

We support the 2015 Paris Agreement, Destination 2050, the United Nations Global Compact and the 17 UN Sustainable Development Goals. Here are some examples of our recent sustainable aviation commitments.

RYANAIR SUSTAINABLE RESEARCH CENTRE

We announced the extension of our partnership with Trinity College Dublin out to the end of the decade. We will make a further €2.5m donation (€4m total) to fund the Ryanair Sustainable Aviation Research Centre.

The Research Centre examines Sustainable Aviation Fuel (SAF), zero carbon aircraft propulsion systems and non-CO2 Emissions.

Ryanair extends Trinity College Dublin partnership to 2030

SCIMITAR WINGLET INSTALLATION

We have retrofitted 60% of our Boeing 737-800NG fleet with split scimitar winglet technology (target 409 by 2026). These winglets reduce carbon emissions and fuel burn by approximately 1.5%, while lowering take off noise by over 6% and decreasing NOx emissions by 8%.

AIR TRAFFIC MANAGEMENT REFORM

Ryanair has long campaigned for EU reform to ensure Air Traffic Control (ATC) centers are fully staffed but ATC delays are getting worse. Ryanair calls on all passengers to visit the 'Air Traffic Control Ruined Your Flight' webpage (www.atcruinedourholiday.com) and demand that national Transport Ministers take action to properly manage and staff their national ATC services to avoid unnecessary ATC delays and unnecessary emissions.

SIGN THE PETITION

SUSTAINABLE AVIATION FUEL (SAF)*

SAF can reduce greenhouse gas emissions by up to 80%. We have an industry leading target of 12.5% of our 2030 fuel requirements coming from SAF. This summer, Ryanair is using a 2% SAF blend at European Union and UK airports

*Sustainable Aviation Fuel (SAF) is the term for all aviation fuels that, unlike conventional aviation fuel, are produced without the use of fossil feedstocks such as crude oil, and also meet established sustainability criteria. The SAF used by Ryanair meets the requirements of the European Union's Renewable Energy Directive II (RED II). Using SAF results in a reduction in carbon emissions compared to the traditional jet fuel it replaces over the lifecycle of the fuel. Emission reductions are predominately achieved during the production process and through the use of sustainable feedstocks. The emissions from its combustion in an aircraft engine are effectively the same as those of fossil fuels.
